About Resource Futures

Resource Futures is a purpose-driven, carbon neutral consultancy with over 30 years' experience in waste reduction, recycling and reuse.

Our vision is a world where everyone uses resources sustainably. We're working to achieve this by enabling our clients to best manage material resources for positive social, environmental and economic benefits.

Our experience in sustainable events began through the work of one of our founding companies, Network Recycling. Since then, it has included everything from helping our network of 70 groups in Oxfordshire with sustainability focussed events, to training for groups as part of Bristol Green Capital 2015, to our work on the London Olympic games and to event venue mapping for Zero Waste Scotland.
